Hydraulic evidence from static-and stressed-sampled during this study are small-diameter (typically 4-in.) water-level measurements also indicates that water moves domestic wells in which it was not practical to operate the from the lakes into the aquifer. Transport of diatoms from owners submersible pump for such a long sampling period. the lake to nearby wells could indicate that contaminants and The MPA concentrates material from a much larger sample pathogens from the surface are being introduced into local volume than the method used here. Therefore, cell counts drinking-water supplies. Detection of Navicula in 4 of 18 resulting from a MPA may be more accurate than results of a samples is of particular interest because previous studies have particle analysis conducted on a smaller volume of sample; shown that the presence of that diatom genus is a significant however, the...
